MAINTENANCE AND STORAGE GUIDE

Finishing veneer furniture is a crucial step in enhancing the beauty of the room. In order to maintain this appearance, it must be protected from moisture, damage, scratches and stains. The finish of the entire APPAREIL Atelier collection is available in either varnish or lacquer.

-HUMIDITY :Furniture will age faster if it is stored in a basement, garage, attic or warehouse.

-HEAT: Avoid placing a piece of furniture in front of a heat source such as a radiator or a fireplace. Extreme changes in humidity can damage the wood.

WATER: Placing hot or wet items on the surface of the surface can cause a chemical reaction of the finish which results in whitish circles or stains. Use coasters and trivets whenever possible and clean up spills as quickly as possible using a

CLEANING

We do not recommend any special products for polishing, waxing or cleaning the furniture, as this adversely affects the finish. Stubborn stains should be treated with a damp cloth with a splash of a mild cleaner. Avoid rubbing too much in one area, as this may damage the finish. Dusting furniture is crucial for its longevity and appearance. Dust is abrasive and if furniture is not cleaned frequently or in the right way, it can damage the surface of the furniture.

BE CAREFUL WHEN USING WATER to clean the wood. Wood should never be wet or soaped. Water penetrating the wood finish can cause surface swelling and distortion or stain the surface. Use a clean, washable cotton cloth. The laundry should be damp enough for dust to adhere to it, but should not wet the surface of the furniture. If traces of water are visible on the surface after washing the laundry once, it is because it has been too wet.

REPAIR OF A LACQUERED OR VARNISHED SURFACE

Marks and scratches on a lacquered surface should be repaired by a professional. Contact us if you have any questions related to the maintenance of your furniture or to have a reference for repairing it if the warranty period has expired.
